Education

Carnegie Mellon University, School of Computer Science – May 2027

Bachelor of Science, Artificial Intelligence

Current GPA: 3.36

Courses:

Artificial Intelligence, Machine Learning, Probability and Computing, Design and Analysis of Algorithms, Parallel and Sequential Data Structures and Algorithms, Deep Learning, Advanced Natural Language Processing

Experience

Incoming Customer Success Engineer Co-op at IBM, NYC

August 2026

AI Research Intern at Reliable Autonomous Systems Lab, CMU

May 2024 – Present

- Built an interactive computer vision assistant that helps users track and retrieve food objects in dynamic environments (e.g., kitchens with occlusions and missing data).
- Developed heuristics (e.g., human pose + interaction tracking) to infer hidden states, improving robustness in real world scenarios.
- Evaluated system performance across controlled and real-world settings, achieving strong accuracy ($P=0.89$, $R=0.93$) and reliable real-world transfer ($P=0.70$, $R=0.70$). Work contributes to ongoing research publication.

Astro Beta Tester at Amazon

September 2025 – December 2025

- Tested and evaluated the Amazon Astro home robot, identifying system-level issues in perception, interaction, and task execution.
- Built prototype scripts to test and demonstrate new robot behaviors and task scenarios.

Developer at Star Wars Club BB8 Team, CMU

April 2025 – Present

- Collaboratively designed and engineered a life-size, fully automated BB-8 droid (mechanical design, electronics, controls, perception).
- Currently developing the voice recognition feature to enable interactive communication.

Developer at ScottyLabs, CMU

October 2023 – October 2024

- Collaborated on building a full-stack platform that streamlines the Lost and Found process at CMU.
- Designed backend logic for search and matching workflows.

Extracurriculars

Projects

- **RAG Chatbot** (Feb 2026) - built a retrieval-augmented generation system to answer domain-specific queries (CMU/Pittsburgh knowledge)
- **OctoMind** (December 2025) – developed an AI-powered task manager that predicts task duration from natural language input and automatically schedules work.
- **MAP_CMU** – presented at *TartanHacks* (February 2024) – Built a routing system using A* to optimize timeefficient navigation across campus schedules.

Executive Board Member and Dancer at CMU Jiya

September 2023 – Present

- Choreograph and dance for CMU's only competitive Bollywood fusion team; organize city-wide dance workshops.
- Competed nationally; qualified and competed in National Championships 2025.

Technical Skills

Languages: Python, Java, C, C++, JavaScript/TypeScript, PHP, SQL, R, HTML/CSS, Assembly

Frameworks/Libraries: Pytorch, Tensorflow, OpenCV, ROS, Node.js, React.js, Firebase, Docker, Git
